Summary

Lead AI Engineer, five years across Fintech, EdTech, and now AI, building user-centric AI products and the workflows and teams that ship them. As comfortable architecting agentic systems as explaining them to the non-technical stakeholders who fund and use them. I did my Master's in AI in China, and speak fluent Mandarin.

Experience

Lead AI Engineer, Hot Blue Tree – Mornington, Victoria Jan 2025 – Present

- Conceived and architected major platform features from concept to MVP: a conversational agent that profiles users from open-ended dialogue, and an agent that synthesises raw data into actionable, data-driven insights.
- Sole engineer pre-seed: built the prototypes and technical roadmap whose competitive edge anchored a \$5M raise; now lead a two-engineer AI team while owning DevOps, infrastructure, and feature planning.
- Pioneered the company's agentic development workflow, designed for SOC 2 compliance from the outset; now standard across all 13 developers, with a reported 3x velocity gain with no code quality trade-off.

Junior Developer, Schoolbox – Camberwell, Victoria Jan 2022 – Sept 2022

- Developed internal tools and dashboards with exceptional acceptance and satisfaction from team members.
- Accelerated from graduate developer to accountable autonomous contributor within 6 months, tackling user-facing feature work, on-premise deployments, level 3 technical support, and AWS cloud management.

Efficiency Lead, Partners in Planning – Carnegie, Victoria (Part-Time) Sept 2021 – May 2023

- Meticulously analysed internal processes, implemented automations that save 40+ hours of labour per month, reducing time from client first-touch to discovery to proposal and increasing client conversion rates.

Education

Zhejiang University – MS in Engineering (Computer Science & Technology) Sept 2022 – Mar 2025

Monash University – BS in Information Technology (Software Development) Aug 2018 – Apr 2022

Monash University – BS in Arts (Chinese Studies) Aug 2018 – Apr 2022

Projects

NeuronautLLM Science Direct - Graphical Models (2024) Paper

A novel visual system application for analysing neuron activation in LLMs.

- Awarded *Best Paper* at China Graph 2024 Conference.
- **Contribution:** Principal researcher, developer and writer of this work under my supervisor's guidance.
- **Skills & expertise:** LLMs, NLP, transformers, embeddings, data visualisation, usability, Python, TypeScript

VidGuard3D IEEE TVCG (2026) Paper

A visual risk analysis approach for protecting 3D assets against video-based reconstruction attacks.

- **Contribution:** Software Engineer
- **Skills & expertise:** 3D reconstruction, 3D simulation, data visualisation, TypeScript, Python

Skills

AI/ML, automation: LLMs, NLP, LlamaIndex, LangChain, Scikit-learn, PyTorch, TensorFlow, Power BI, n8n

Data Engineering: pandas, numpy, SQL, MongoDB, Firebase

Languages: Python, TypeScript, HTML, CSS, PHP, C++, Java, C#

Cloud: AWS (S3, ECS, ALB, RDS, Lambda, CloudWatch), CloudFlare, Google Cloud Platform

DevOps: Docker, Terraform, CI/CD, GitLab, GitHub, ESLint, Prettier, Husky, Huff
